446-001	Complete Light	\$47.29
446-002	Replacement Globe	9.99

Make-Up Air And Exhaust Wall Type Hoods

Make-up air hoods are an integrated kitchen ventilation solution combining the exhaust only hood with a supply plenum to return filtered outside air into the kitchen area to compensate for exhausted air. This reduces the amount of conditioned air that is removed from the kitchen area and prevents a negative pressure in the space.

Exhaust only hoods remove the unwanted smoke and grease laden vapors produced during the cooking operation from the kitchen area.

All models include:

- Aluminum baffle filters
- Collars
- Hanging brackets
- Stainless steel grease trough and trap
- Standard incandescent light fixture(s) — (1) light for 4' to 6' hoods, (2) lights for 7' to 8' hoods, (3) lights for 9' to 12' hoods

The standard width is 48" and height is 24". Add 10% to standard hood price for 54" width. All hood models meet the requirements of NFPA 96, NFPA70, ICC, NSF and are ETL listed.

Options (ask for details):

- LED lighting
- Factory-installed fire suppression
- Interlocking and auto-initiating control packages according to your needs
- Condensate hoods when you only need to ventilate steam, heat and odor
- Heated make-up air systems
- Ventless hoods for situations where standard ventilation is not practical
- Over 50 hood models to choose from and a full line of options and accessories
